

ENGINEERING BY THE NUMBERS

BY BRIAN L. YODER, PH.D.

A NOTE ON DATA IN THE 2016 PROFILES:

In a change from previous issues of *Profiles*, ASEE has decided to omit data from schools that have not participated in our survey for more than two years. In the past, we carried forward data from prior years for non-participating schools so as to maintain a consistent benchmark. As a result of our tightened inclusion requirements, tabulations in this issue of *Profiles* exclude data from 50 colleges. This difference accounts for totals that are noticeably lower than in the 2015 *Profiles*: 13,000 fewer undergraduate engineering students, awards of 2,000 fewer bachelor's degrees, and a decrease in master's-level enrollment. Schools excluded from tabulations were mostly smaller institutions, many with undergraduate engineering programs only.

Despite the lower totals, which reflect current data from participating schools, ASEE's survey results show substantial growth in engineering schools over the past 10 years. Recent enrollment numbers, however, suggest that engineering may be now entering a period of slower growth.

BACHELOR'S DEGREES AND ENROLLMENT

The number of students awarded bachelor's degrees in engineering rose by 6 percent from 2015 to 2016, slightly above the average 5.4 percent annual increase in bachelor's degrees in engineering since 2007. Engineering Science and Engineering Physics, and Computer Science (inside Engineering) had the largest percentage increases in 2016 over the previous year: 24 percent and 23 percent, respectively. Electrical/Computer Engineering and Mining Engineering had the largest percentage decline from 2015 to 2016, a decrease of 17 percent and a decrease of 8 percent, respectively.

Enrollment trends indicate that the number of bachelor's degrees may not continue to grow at its recent pace. Growth in undergraduate engineering enrollment is slowing after more than a decade of strong annual increases. Our benchmark in 2016 shows a decrease from 2015 of 10,026 full-time and part-time students enrolled in an undergraduate engineering program. That number takes into account the exclusion of non-participating schools, which resulted in 13,000 fewer enrolled engineering students. If the excluded schools' data from previous years had been included in the latest totals, our benchmark would show a slight increase in 2016 over 2015, but a lower rate of growth than the annual average for the past 10 years. Based on this year's benchmark, undergraduate engineering enrollment has grown by 57 percent since 2007, an average increase of 5.7 percent per year. Civil Engineering/Environmental Engineering and Computer Science (inside Engineering) had the largest percentage increase in 2016

over the previous year, with both showing an 11 percent gain. Petroleum Engineering and Mining Engineering had the largest percentage drop in enrollment, showing a decrease of 22 percent and 23 percent, respectively.

MASTER'S DEGREES AND ENROLLMENT

Master's degrees awarded in 2016 increased by 9 percent over 2015, reflecting a higher growth rate than the 6.9 percent average annual increase in degrees awarded since 2007. Engineering disciplines with the largest percentage increase in degrees awarded included Civil/Environmental Engineering, which granted 24 percent more degrees in 2016 than in 2015, and Computer Science (inside Engineering) which granted 20 percent more degrees in 2016 over the previous year.

As with bachelor's degrees, the trend of strong growth in master's degrees is unlikely to continue in coming years. Enrollment in engineering master's degree programs decreased by 3 percent from 2015 to 2016 to 127,159. Enrollment in master's degree programs has increased by 42 percent since 2007, or 4.2 percent per year, on average.

DOCTORAL DEGREES AND ENROLLMENT

Engineering doctoral degrees decreased slightly from 2015 to 2016 – less than 1 percent – breaking a trend that saw the award of doctorates increase by an average of 2.9 percent a year over the previous decade. The engineering disciplines with the largest percentage drop in doctoral degrees included Petroleum Engineering, which fell 18 percent, and Electrical/Computer Engineering, which declined by 10 percent.

Enrollment in doctoral programs flattened, increasing by 1 percent from 2015 to 2016, following a 31 percent growth 2007, or an average 3.1 percent per year. Civil/Environmental Engineering and Engineering (General) showed the largest percentage increases in doctoral enrollment of 30 percent and 19 percent, respectively, from 2015 to 2016.

ENGINEERING STUDENTS FROM OTHER COUNTRIES

Engineering degrees earned by students from outside the United States increased from 2015 to 2016. The proportion of bachelor's degrees earned by non-resident aliens increased from 9.1 percent to 9.6 percent, reaching a new high mark for this cohort. After dropping in 2008 and 2009 to a low of 6.0 percent, the proportion of bachelor's degrees awarded to non-resident aliens has increased every year since. The proportion of master's degrees awarded to non-resident aliens increased by more than 11 percent, from 47.0 percent in 2015

to 58.1 percent in 2016. Since 2007, when non-resident aliens accounted for 38.7 of master's degrees, their representation has increased nearly 20 percent. Students from outside the United States accounted for 54.8 percent of doctoral degrees awarded in 2016, maintaining a rate that has been consistent since 2008.

FEMALE ENGINEERING STUDENTS

Female engineering students continued their slow increase as a percentage of engineering degrees awarded at all degree levels: bachelor's, master's, and doctoral. The proportion of women among students receiving a bachelor's degree increased by one percent in 2016 over the previous year, to 20.9 percent. The representation of women among bachelor's degree recipients has risen from 18.7 percent in 2007 to 20.9 percent in 2016. The highest proportion of degrees awarded to women in 2016 was at the master's level – 25.4 percent. This represented a slight percent increase over 2015 and a three percent increase since 2007. The representation of females among doctoral degree recipients also increased slightly – from 23.1 percent in 2015 to 23.3 percent in 2016. The proportion of women among doctoral degree recipients has increased 2.5 percent from since 2007, when they made up 20.8 percent of that cohort.

FACULTY

The number of tenured and tenure-track faculty increased to 27,907 in 2016. The number of full professors and assistant professors increased by 538 and 710, respectively, while the number of associate professors decreased by 180 from the fall of 2015 to the fall of 2016. The percentage of faculty members who are women increased by half a percent from 2015 to 16.3 percent in 2016. The representation of African Americans decreased slightly to 2.3 percent in 2016, while that of Asian faculty increased to 27.5 percent and that of Latinos rose to 3.6 percent.

More detailed data for 351 U.S. and 9 Canadian engineering colleges can be found in the following pages of the 2016 *Profiles of Engineering and Engineering Technology Colleges* or online at www.asee.org/colleges.

Forty-three Canadian institutions are currently accredited by the Canadian Engineering Accreditation Board. Nine of those institutions participated in the 2016 ASEE Survey of Engineering & Engineering Technology Colleges. The data submitted by these institutions display similar trends as those seen at U.S. institutions. The representation of women is almost identical at the bachelor's and master's level in both countries, while faculty trends for women are also very close.
